

PROJECT NAME

Baggage Handling System Upgrades

CURRENT CHALLENGE

The baggage handling system located 'behind the scenes' where customers drop off their bags at the check-in counters requires life-cycle upgrades.

WHAT WE'RE DOING

New, more efficient baggage handling systems will be installed to better sort, screen, and help get your bags to your final destination.

WHAT TO EXPECT DURING CONSTRUCTION

Since the current system needs to stop in order to replace it, starting in the fall, traveling guests will need to take their bags around the corner to a new location and drop them off on a temporary belt system, located across from screening.

Once this step is required, signage and instructions will be placed in the area to guide travelers.

ESTIMATED PROJECT COMPLETION DATE

Fall 2019

DID YOU KNOW...?

- The 2015 air terminal building expansion doubled the size of its previous terminal. As the number of passengers increase, the behind the scenes infrastructure also must accommodate the growth of our community.
- The baggage system upgrade project will not increase interruption of passengers' baggage from arriving at their destination. The drop off area may be different, but all bags will continue to be screened and sorted as normal.
- The new belt system is planned to be orange!
