

Saskatoon Airport

July 18<sup>th</sup>, 2019

As Saskatoon Airport continues to invest into the future in order to best serve the people and communities of Saskatchewan. The need to consider our energy and carbon footprint has been identified as a major opportunity for the airport to enhance our sustainability profile.

Senior management are committed to the following goal in order to become the best corporate citizen to our staff, airport partners and the City of Saskatoon:

**“By year 2023, reduce per passenger carbon emissions by 20% from our 2015 benchmark year.”**

In order to meet our goal by 2023, we are undertaking the following initiatives:

- Assessing opportunities that materially grow our commitment to our sustainability plan and culture.
- Establishing a carbon impact benchmark and enhanced real time data tracking.
- Assessing the cost-benefit of on-site renewable energy generation and related technologies.
- Applying sustainability guidance in corporate decision making and establishing targets/goals.

Sustainability is a core pillar in our corporate strategy framework as Skyxe Saskatoon Airport continues to provide the most valued experience for our passengers.

Sincerely,

A handwritten signature in black ink, appearing to read "Stephen Maybury".

Stephen Maybury
